Introduction to Mechanical Turk

The Amazon Mechanical Turk Requester User Interface (RUI) provides access to Mechanical Turk functionality using a graphical user interface. After reading this introduction to the Amazon Mechanical Turk RUI, you should have a good idea what the Mechanical Turk RUI offers and how it can fit in with your business.

Overview of Mechanical Turk

Amazon Mechanical Turk is a web service that provides an on-demand, scalable, human workforce to complete tasks. Mechanical Turk provides a marketplace for work and gives you access to Workers around the world and around the clock. Mechanical Turk enables you to complete a variety of tasks, including data categorization, moderation, verification, and tagging. For more information about Mechanical Turk, go to https://www.mturk.com.

Good workers and clear instructions are the key to obtaining successful results for any kind of project. Mechanical Turk provides tools to help you select good Workers and create clear instructions for the selected Workers. You can make your instructions as detailed as necessary to help Workers understand the tasks you want them to perform.

You can choose to identify good Workers from the over 500,000 Workers in the Mechanical Turk Marketplace, or you can use Master Workers. Master Workers are Workers who have demonstrated the ability to provide successful results for specific types of tasks across multiple Requesters on the Mechanical Turk Marketplace. Mechanical Turk offers Master Workers in Photo Moderation and Categorization, but you can ask them to do any type of Human Intelligence Task (HIT).

Advantages

The major advantages of Mechanical Turk are:

- On demand workforce—With 500,000 Workers in 190 countries around the world, Mechanical Turk Workers are available whenever you need them.
- Scalable workforce—With no minimum project size, you can scale your Mechanical Turk volume up and down with your business. You may have 100 tasks one day and 10,000 the next.
- Speed—Workers can complete tasks in parallel so work is done faster with a limited workforce.
- Accuracy—Master Workers have been pre-qualified for their demonstrated ability to follow instructions when completing tasks such as Photo Moderation and Categorization.

• **Pay only for satisfactory work**— You do not pay a Worker or Mechanical Turk fees until you accept the Worker's work.

Mechanical Turk Concepts

This section describes the concepts and terminology that you must understand to use Amazon Mechanical Turk effectively.

Requesters

A Requester creates tasks on Mechanical Turk for Workers to work on. As a Requester, you use the Requester User Interface (RUI) to create tasks, check the status of your tasks, and accept or reject work performed on tasks. Workers see your account name (specified by your Amazon.com account) when they view and accept your tasks.

Human Intelligence Tasks (HITs)

A Human Intelligence Task (HIT) is a single, self-contained task a Requester creates on Mechanical Turk, for example, "Identify the color of the car in the photo."

Assignment

You can assign many Workers to work on the same HIT, which is useful way of getting consensus on a subject by many workers giving the same answer. A Worker can only accept a HIT once and can only submit one assignment per HIT. This guarantees that multiple Workers must complete a HIT that has multiple assignments.

If a Worker fails to complete an assignment before the time frame specified (i.e., the Worker abandons the HIT), or if the Worker chooses not to complete it after accepting it (i.e., the Worker returns the HIT), the assignment becomes available for other Workers to work on.

Workers

A Worker is a person who completes assignments. Workers use the Mechanical Turk website (http://mturk.amazon.com/) to find assignments to work on, submit responses, and manage their account.

Master Workers are Workers who have demonstrated the ability to provide successful results for specific types of tasks across multiple Requesters on the Mechanical Turk Marketplace. Mechanical Turk offers Master Workers in Photo Moderation and Categorization, but you can ask them to do any type of HIT.

Approval and Payment

Workers submit responses for assignments. If you approve their work, Mechanical Turk transfers the HIT reward from your Mechanical Turk account to their Amazon Payments accounts. Workers don't get paid if you reject their work.

When you post a batch of HITs, you agree to approve or reject work by a specified deadline. If that deadline passes, Mechanical Turk approves the assignments and pays the Workers who submitted work.

Amazon Mechanical Turk processes payment of the reward to the Worker after you approve the assignment. Amazon Mechanical Turk transfers the reward from your Amazon.com account to the Worker's Amazon.com account. Before you can post your batch of HITs, you must have enough money in your

account to pay for all of the work. You can deposit or withdraw funds from your Mechanical Turk account at any time using the Requester website (http://requester.mturk.amazon.com/).

Qualification Type

It is important to note that **anyone** can register to work in the Mechanical Turk Marketplace. To control who can work on **your HITs**, you can require that Workers have specific "Qualifications" before they can work on your HITs. You can create your own custom Qualification Types and assign them to Workers. Or, you can use the Qualification Types provided by Mechanical Turk.

Mechanical Turk provides several Qualification Types including Approval Rate, which is the percentage of assignments submitted that have been approved, and Assignments Approved, which is the number of Assignments that were approved for the Worker. The Approval Rate and Assignments Approve Qualification Types are automatically calculated based on a Worker's account statistics and history. If you don't want to use Workers who just registered this morning and have no work history, we recommend that you require Workers to have a 95% Approval Rate and 1,000 Approved Assignments to work on your project.

The **Master** Qualification Types give you easy access to Master Workers who have demonstrated the ability to provide successful results for specific types of tasks across multiple Requesters on the Mechanical Turk Marketplace. Mechanical Turk offers Master Workers in Photo Moderation and Categorization, but you can ask them to do any type of HIT.

Getting Started with the Requester UI

To get started using the Requester User Interface (RUI), you must create an Amazon Mechanical Turk account, or sign in if you already have an account.

To create an Amazon Mechanical Turk account, or sign in

• Go to the Amazon Mechanical Turk Requester website and do one of the following.

То	Do this
Create a Mechanical Turk account	Click Create an Account and follow the on-screen instructions.
Sign in using your Mechanical Turk account	Click Sign In: Requester and follow the on-screen instructions.

Using the Requester User Interface

Once you have signed in using your Mechanical Turk account, you are ready to use the Requester User Interface (RUI). The RUI makes it easy to create a HIT template, publish HITs, manage batch results, and manage Workers. The steps for using the RUI are shown in the following table.

Step	Relevant Topic
Step 1 - Define the properties and design the layout of your Project.	Creating a Project (p. 7)
Step 2 - Publish your batch of HITs.	Publishing a Batch (p. 23)
Step 3 - Approve or reject the work done on your HITs. You can download the results, review them offline, and republish rejected HITs.	Managing Batches (p. 27)

Step	Relevant Topic
Step 4 - View a Worker's approval rating, award bonuses, assign qualifications, or block Workers from working on your HITs.	Managing Workers (p. 38)

Creating a Project

This section describes how to create an Amazon Mechanical Turk project on the Mechanical Turk Requester website https://requester.mturk.com/.

How to Create a Project

You must create a Mechanical Turk project before you can create a batch of HITs. This section shows you how to create a Mechanical Turk project.

The Mechanical Turk project contains the HTML of your HIT page as well as meta-data about the HIT, called HIT properties, such as the expiration date of the HIT. To create a project, start with one of the provided sample project templates and customize it.

Categorization and Sentiment projects are different from the other sample projects in the list. For information about Categorization projects, see How to Create a Categorization Project (p. 15). For information about Sentiment projects, see How to Create a Sentiment Project (p. 18).

The following are the overall steps you need to take when creating a Mechanical Turk project.

- Define the projects properties.
- Design the project's HTML layout.
- Preview the project.

The following procedure describes in detail how to create a project using the **Tagging of an Image** sample project.

To create a project

- 1. On the Mechanical Turk Requester website https://requester.mturk.com/, click the Create tab and then click New Project.
- 2. From the list under **Start a New Project**, select a sample project and click **Create Project**. For example, click on **Tagging of an Image** and then click **Create Project**.

3. On the Edit Project page, the tabs Enter Properties, Design Layout, and Preview and Finish, guide you through the process of preparing a project.

Edit Project		
Specify the properties that	are common for all of the	HITs created using this project.
• Enter Properties	② Design Layout	③ Preview and Finish
	~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~	man man

- 4. On the **Edit Properties** tab of the **Edit Project** page, fill in the property entry fields according to the specifics of your HIT.
  - a. Fill in the **Project Name** and the property entry fields in the **Describe your HIT to Workers** section of the page.

Edit Proje	ct		
Specify the prope	erties that are common for all of the HITs created using this project.		
Enter Prop	Design Layout 3 Preview and Finish		
Project Name	Tagging of an Image This name is not displayed to Workers.		
Describe you	r HIT to Workers		
Title	Describe an image		
	Describe the task to Workers. Be as specific as possible, e.g. "answer a survey about movies", instead of "short survey", so Workers know what to expect.		
Description	ion Please view and write a tag for an image		
	Give more detail about this task. This gives Workers a bit more information before they decide to view your HIT.		
Keywords	image, tag, picture, tagging, photo, different		
	Provide keywords that will help Workers search for your HITs.		
	This project may contain potentially explicit or offensive content, for example, nudity. (See details)		

The following table describes the **Project Name** field and the property entry fields for the **Describe** your HIT to Workers section of the Edit Properties tab.

Field	Description
Project Name	The project name field is filled in, but you can change it. Make sure the project name is descriptive so that you can easily identify the project when you want to publish a batch with the project. The project name is not displayed to Workers.
Title	Enter the name of the HIT. Be specific. For example, enter "Tag landmark images" instead of "Tag photos." The title is displayed to Workers.
Description	Describe the HIT. The search mechanism searches using this description so use words that you think will help Workers find your HITs.
Keywords	Enter a comma-separated list of words that Workers can use to find your HIT.

b. Fill in the property entry fields in the **Setting up your HIT** section of the page.

\$ 0.05 Tip: Consider how long it will take a Worker to complete each task. A 30 second task that pays \$0.05 is a \$8.00 hourly wage.
1 How many unique Workers do you want to work on each HIT?
1 Hours  Maximum time a Worker has to work on a single task. Be generous so that Workers are not rushed.
7 Days  Maximum time your HIT will be available to Workers on Mechanical Turk.
8 Hours  This is the amount of time you have to reject a Worker's assignment after they submit the assignment.
Advance

The following list describes the property entry fields for the **Setting up your HIT** section of the **Edit Properties** tab.

Field	Description
Reward per assignment	Specify how much money you'll pay the Worker if you approve an assignment.
Number of assignments per HIT	Specify the number of unique Workers you want to work on each HIT. One assignment per HIT means that only one Worker works on a HIT. You might want multiple Workers to work on a HIT to see if there is agreement between Workers, which can increase your trust in the results.
	A Worker can only accept a HIT once and can only submit one assignment per HIT. This guarantees that multiple Workers must complete a HIT that has multiple assignments.
Time Allotted Per Assignment	Specify how long the Worker can hold on to individual assignments within your batch to work on them. Once this time has passed, the HITs are withdrawn from the Worker so others can work on them.
HIT expires in	Specify how long Workers can accept HITs in the batch. Workers can't accept HITs in the batch once this time expires. Workers can finish working on assignments they previously accepted even though the batch is no longer available for others to work on.
Auto-approve and pay Workers in	Specify when Amazon Mechanical Turk will automatically approve your HITs and pay Workers. This determines the amount of time you have to reject an assignment submitted by a Worker before the assignment is auto-approved and the Worker is paid. This limit ensures that Workers get paid in a timely manner.

- 5. When you are done filling in the property fields on the **Edit Project** page, click the **Design Layout** button.
- 6. On the **Design Layout** tab of the **Edit Project** page, use the controls in the formatting toolbar to edit the text on the page.

The template variables are replaced by data from a HIT data file. You use a dollar sign (\$) and curly brackets to create a variable. The following table shows how to represent the variables.

Variable Type	Format
text	Use to add text from a HIT data file. Define using a dollar sign (\$) and curly brackets. For example: \${continent}
image	Use to add images from a HIT data file. Define using a dollar sign (\$) and curly brackets in a HTML image tag, <img/> . For example: <img alt="image1" height="200" src="\${image_url}" style="margin-right:&lt;br&gt;10px;" width="200"/>
link	Use to add links from a HIT data file to audio and video files, and websites. Define using a dollar sign (\$) and curly brackets in a HTML href tag, <href>. For example: Video link: <b><a <br="" target="blank">href="\${link}"&gt;\${link}</a></b></href>

8. Add the following HTML code that contains the \${continent} variable to your template.

This landmark is in \${continent}.

9. Create your HIT data file.

The HIT data file is a comma-separated-value . CSV file that contains the data values used for template variables. Many spreadsheet applications, including Microsoft Excel, can save files in the .CSV file format.

The data values in the HIT data file must be separated by commas, with each new line in the file representing a new HIT. The number of data values in one row should exactly match the number of values needed in each HIT template. The first row in the .csv HIT data file contains the column headings for the data value columns. The order in which you use the variables in the template does not need to match the order of columns in the .csv file.

The names of the template variables must match the column headings for the values in your HIT data file. For example, since we used the f(continent) variable, our HIT data file must have a column that has the **continent** heading.

	H		HIT Data File
	15	<b>A</b>	
Tog this image	1	l continent	image_url
1 ag uns mage	2	North America	http://www.myServer.com/images/image1.gif
Christelineer		Europe	http://www.myServer.com/images/image2.gif
Guidelines:	4	Africa	http://www.myServer.com/images/image3.gif
Name the landmark for example	the G	North America	http://www.myServer.com/images/image4.gif
Specify the country the landmark	is in for	5	
This landmark is in \$(continent).			×

Your HIT data file cannot have line breaks between data cells and "\r" is not supported as a line break character. Apple Macintosh computers insert this character when they convert a Microsoft Excel table into a .csv file.

If your HITs contain images or videos, you must include links to them in the HIT data file, and the images and videos must be publicly accessible. The user interface does not provide a tool for uploading images or videos. Consider using one of the publicly-available tools to upload your images into Amazon S3.

10 Create two input fields in your template, named Landmark and Country, where Workers can enter the answers for a HIT.

You must include the HTML *name* attribute in the input field definition. Make your *name* attributes descriptive because they are used as the column headings in the **Results** table.

The following example shows an HTML table that has two input fields, Landmark and Country, which both have a size of 25.

```
Landmark

<input type="text" name="Landmark" id="Field1" size="25" />

Country

<input type="text" name="Country" id="Field2" size="25" />
```

The RUI returns results in a table that is stored in a comma-separated-value .csv file. The number of input and answer fields in one HIT determines the number of columns in the **Results** table. One row in the **Results** table represents a complete set of answers for one HIT.

	А	В	С	D
1	Input.continent	Input.image_url	Answer.Landmark	Answer.Country
2	North America	http://www.myServer.com/images/image1.gif	Grant Canyon	US
3	North America	http://www.myServer.com/images/image2.gif	Eifel Tower	France
4	Africa	http://www.myServer.com/images/image3.gif	Cape Town	South Africa
5	North America	http://www.myServer.com/images/image4.gif	Yellowstone	US
6				

11. Delete any code that you don't need and then click **Save** to save the HTML of your project.

Mechanical Turk deletes a project if you don't use the project for 120 consecutive days. If you need to access your project for a longer period of time, we recommend that you copy the HTML and save it on your own system.

12 Click Edit HTML Source to exit the HTML source. The HIT Preview page with your changes appears.

14 On the Preview and Finish tab of the Edit Project page, click Finish.

After you click **Finish**, the **Create** page displays and your project appears in your list of existing projects.

You have set the HIT properties for all of the HITs in your batch and designed the HTML page that Workers working on your HITs will see. Now, you need to publish the batch to make it available to Workers. For information about publishing a batch, see Publishing a Batch (p. 23).

## How to Create a Categorization Project

This section shows you how to create a Mechanical Turk Categorization project. Categorization projects are different from the other project templates listed on the **Create** page.

A Categorization project includes everything you need: predesigned HITs that do not require editing in HTML, pre-qualified Master Workers who have demonstrated expertise in categorization HITs, price recommendations based on comparable HITs in the Mechanical Turk marketplace and analysis tools that make it easy to verify results and identify gaps in instructions that may be causing Worker confusion.

The following procedure describes in detail how to create a categorization project.

#### To create a categorization project

- 1. On the Mechanical Turk Requester website <a href="https://requester.mturk.com/">https://requester.mturk.com/</a>, click the Create tab and then click New Project.
- 2. From the list under Start a New Project, click Categorization, and then click Create Project.

9. You'll receive an email when your categorization project has been completed. The email contains a link to the Requester website so you can pick up your results. For more information about retrieving results for your project, see Managing Batches (p. 27).

## How to Create a Sentiment Project

This section shows you how to use the Amazon Mechanical Turk Sentiment Application (App) to create a Sentiment project. Similar to the Categorization App, the Sentiment App includes everything you need: predesigned HITs that do not require editing in HTML, pre-qualified Master Workers who have demonstrated expertise in categorization HITs, price recommendations based on comparable HITs in the Mechanical Turk marketplace and analysis tools that make it easy to verify results.

Sentiment projects are similar to the Categorization projects, but both Sentiment and Categorization projects are different from the other project templates listed under **Start a New Project**.

The following procedure describes in detail how to create a sentiment project.

#### To create a sentiment project

- 1. On the Mechanical Turk Requester website <a href="https://requester.mturk.com/">https://requester.mturk.com/</a>, click the **Create** tab and then click **New Project**.
- 2. From the list under Start a New Project, click Sentiment, and then click Create Project.

## **Publishing a Batch**

Publishing your HITs on the Amazon Mechanical Turk web page gives Workers the opportunity to work on them. If your project template contains variables, you must upload the .csv data file that supplies the values for the variables in each HIT before you can publish your batch of HITs.

## How to Publish a Batch

This section shows you how to publish an Amazon Mechanical Turk batch. The following procedure describes in detail how to publish a batch using an existing project.

#### To publish a batch

1. On the Mechanical Turk Requester website https://requester.mturk.com/, click the **Create** tab and then click **New Batch with an Existing Project**.

а	mazonmec	hanical tur		
	Home	Create	Manage	Developer
	New Project <u>N</u>	ew Batch with a	an Existing Project	
	Start a New	Batch with a	n Existing Project	
				هي عمر

2. Under **Start a New Batch with an Existing Project**, click **Publish Batch** to publish the batch for your project. (If you want to make edits to your project before publishing a new batch, click **Edit** to make changes to the HIT properties or design layout.)

am	nazonme	echanical tur	REQUESTER	1					
	Home	Create	Manage	Developer	Help				
N	New Project	New Batch with a	n Existing Project					Cre	ate HITs individually
	Start a Ne	w Batch with ar	n Existing Project						
		Project Name	Title	Creat	tion Date 🔻				
		Writing	Write a short s	ummary Maj	y 29, 2014	Publish Batch	Edit	Сору	Delete

	Tago	jing of an Image	Describe an	image Marc	ch 24, 2014	Publish Batch	Edit	Сору	Delete
					m			~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~	

3. If your project template contains variables, you'll be asked to choose a .csv file to upload. On the **New Batch** dialog box, click **Choose File** to locate the .csv data file and then click **Upload**. (If your HIT template does not contain variables, the HIT Preview page appears, as shown in Step 5.)

New Batch		×
Choose a .csv file with	h the variables you specified in your Pro	ject
Choose File	<no file="" selected=""></no>	

- 4. After your file uploads, click **Next** to preview how your HITs will appear to Workers.
- 5. On the **Preview HITs** page, carefully review your HITs so that you catch mistakes before publishing. For example, make sure that any variables in the HIT are correctly replaced by your input data. Click **Next HIT** to preview the next HIT. You can preview up to 200 HITs in your data file.

#### Amazon Mechanical Turk Requester UI Guide How to Publish a Batch

Your Available Balance: \$10,000.000	(before clicking "Publish HITs")
Your Projected Balance: \$9,999.805	(after clicking "Publiah HiTs")

The following table explains the sections of the Confirm and Publish Batch page.

Section	Description
Batch Properties	Contains the values that you set on the <b>Design</b> tab for the batch properties, including the number of days the batch can exist before expiring, and the number of days you have to reject an assignment submitted by a Worker before the assignment is auto-approved and the Worker is paid.
HITs	Calculates the number of assignments per batch.
Cost	Calculates the cost of the batch assuming you approve all assignments. The total cost is the number of assignments multiplied by the price per assignment plus the Mechanical Turk fee. You must have enough money in your account to cover the total cost before you can publish the HIT. If you don't, you'll be asked to add money to your account.

- 7. Click **Publish HITs** to publish the batch of HITs.
- 8. You can track the progress of the publishing of your batch on the **Batch Details** page. For more information about managing batches, see Managing Batches (p. 27).

## **Managing Batches**

#### Topics

- Displaying Batch Progress, Details, and Results (p. 27)
- Configuring the Review Results Page (p. 29)
- Approving and Rejecting Assignments (p. 31)
- Deleting a Batch (p. 36)

On the **Manage** tab, you can manage your batch results, the Workers who work on your batches, and your Qualification Types. On the **Results** page on the **Manage** tab you can view:

- The progress of your batch
- · The batch details
- The batch results

## **Displaying Batch Progress, Details, and Results**

The following procedure describes how to display information related to your batches.

#### To display the batch progress, details, and results

1. On the Mechanical Turk Requester website <a href="https://requester.mturk.com/">https://requester.mturk.com/</a>, click the Manage tab and then click Results.

Under Manage Batches, you'll see headings for batches in different states.

Home	Crea	ate	Manage	Developer
Results	Workers	Qualific	ation Types	
Manage Batches				
Click on the name of the batch to see more details				
Batche	s in progress (	1)		
Batches	Batches ready for review (7)			
► Batche	Batches already reviewed (3)			

2. Under **Manage Batches**, click the arrow next to the batch state you want to view. The batches in that state appear.

Click on the name of the ba	atch to see more details

## **Configuring the Review Results Page**

You can customize the look and contents of the Review Results page.

#### To configure the Review Results page

1. On the Mechanical Turk Requester website https://requester.mturk.com/, click the Manage tab and then click **Results**.

- 2. Under Manage Batches click the arrow next to the batch state you want to view.
- 3. Click **Results** on a batch.
- 4. Click **Customize View**. The **Configure Data Results** page appears.

Configure Data Results Select the fields you'll need to appro	we the results. All fields will be included when you export results.
Available fields:	Show these fields in this order:
Assignment ID	HIT ID
HIT Type ID	Worker ID
Assignment Status	Your Approval Rate
Accept Time	Answer
Submit Time	
Approval Time	
Rejection Time	
Requester Feedback	
Work Time In Seconds	
Input.Question	
To select fields, drag and drop t	he field from one list to the other (or doubleclick the item).
Apply Settings	

5. Do one or more of the following.

То	Do This
Add fields listed in the results	Drag field names from the <b>Available fields</b> list into the <b>Show these fields in this order</b> list.
Remove fields listed in the results	Drag field names from the <b>Show these fields in this order</b> list into the <b>Available fields</b> list.
Change the order of the fields in the results	Drag the fields up or down the <b>Show these</b> fields in this order list.

6. Click Apply Settings.

## **Filtering Results**

You can display a subset of the results by filtering out results based on the amount of time it took to do the assignment, and on the state of the result: submitted, approved, or rejected. By default, only submitted work appears.

#### To filter the results

1. On the Mechanical Turk Requester website https://requester.mturk.com/, click the Manage tab and then click **Results**.

Home	Crea	ate	Manage	Developer	
<u>Results</u>	Workers	Qualific	ation Types

- 2. Under Manage Batches click the arrow next to the batch state you want to view.
- 3. Click **Results** on the batch you want to filter.
- 4. Click **Filter Results** on the **Review Results** page. The **Filter Results** page appears.

Customize View Filter Results	Upload CSV Approve All Download CSV
Filter Results	
Review only the assignments that meet the	following criteria:
Status Filter only show assignments t Tip: Unselect the status filter if you want to v	that are in Submitted V status. view all of yo Submitted Approved Rejected

- 5. To show assignments of a specified status, select the **Status Filter** check box, and select the state that you want to view from the drop-down list.
- 6. Click Apply Filters.

## **Approving and Rejecting Assignments**

#### Topics

- Reviewing Assignments (p. 31)
- Reviewing Assignments Offline (p. 32)
- Approving Previously Rejected Assignments (p. 35)

A Requester approves or rejects assignments that Workers submit. When you approve an assignment, the Worker gets paid; when you reject an assignment, the Worker does not get paid.

You can approve results individually or all at once. Also, you can sort the results based on the Worker ID so you can review the results from a specific Worker all at once.

### **Reviewing Assignments**

It's convenient to review small batches of results.

#### To approve or reject work

1. On the Mechanical Turk Requester website <a href="https://requester.mturk.com/">https://requester.mturk.com/</a>, click the Manage tab and then click Results.

Home	Cre	ate	Manage	Developer
Results	Workers	Qualific	ation Types	
Manage Batches				
Click on the name of the batch to see more details				
Batches in progress (1)				
Batche	Batches ready for review (7)			
Batche	Batches already reviewed (3)			

- 2. Under Manage Batches click the arrow next to Batches ready for review.
- 3. Click **Results** on the batch you want to review.

4. On the **Review Results** page, do one of the following.

То	Do This
Approve individual results	Click the check box in the row(s) of results you want to approve, and click <b>Approve</b> .
Reject individual results	Click the check box in the row(s) of results you want to reject, and click <b>Reject</b> .
Approve all results in the batch	Click <b>Approve All</b> , or click the check box in the column heading of check boxes and click <b>Approve</b> .
Reject all results in the batch	Click the check box in the column heading of check boxes and click <b>Reject</b> .

5. If you want to sort the list by Worker, click the Worker ID column heading.

You can easily approve or reject all of a Worker's work. Over time, you might find a Worker who consistently submits excellent work and therefore has a very high approval rating. In that case, you could approve all of the Worker's work without reviewing all of it.

Amazon Mechanical Turk processes payments several times a day so there is almost always a small delay between approval and payment. When there is a delay, Workers see HITs as **Approved-pending payment** in their dashboard. The dashboard displays **Paid** for processed payments.

## **Reviewing Assignments Offline**

If a batch is large, it's often easier to download batch results, review them using another application, such as Microsoft Excel, and then upload the revised file. For information about reviewing assignments in the Requester UI, see Reviewing Assignments (p. 31).

Results are available for 120 days after you approve or reject them. If you need to access the results longer than that, you can use the following procedure to download and archive them.

#### **Downloading and Reviewing Assignments**

#### To download and review assignments offline

1. On the Mechanical Turk Requester website https://requester.mturk.com/, click the Manage tab and then click Results.

- 2. Under Manage Batches click the arrow next to Batches ready for review.
- 3. Click **Results** on the batch you want to review.
- 4. On the **Review Results** page, click **Download CSV**.

The following dialog box appears.

Please click here to download your results file.
You can review your results offline and approve or reject the assignments.
<ol> <li>APPROVE ASSIGNMENT: Indicate which assignments to approve by putting an "x" under a column titled "Approve".</li> <li>REJECT ASSIGNMENT: Indicate which assignment to reject by putting your reject feedback under a column titled "Reject".</li> </ol>
The results file was last updated on 11:38 AM PDT.
If workers are still working on your batch, you can view up to the minute results on the <u>Review Results</u> page for the batch at anytime. You can download an updated file on or after 12:38 PM PDT by clicking the <b>Download CSV</b> button on the <u>Review Results</u> page for the batch. Clicking on <b>Download CSV</b> before 12:38 PM PDT will return the previously processed file.

#### 5. Click the word here.

The following dialog box appears.

6. In this dialog box, do one of the following.

То	Do This
To open and view the results	Select <b>Open with</b> and choose the application from the drop down list that you want to use to view the results. The application you select must be able to display .csv files.
To save the results	Select Save to Disk.

7. Click **OK** and open the results file with a .csv compatible application, such as Microsoft Excel.

-			
R	V	AB	AC
AssignmentStatus	ApprovalTime	Approve	Reject
Approved	2010/07/28 21:30:04 +0000	x	
Approved	2010/07/28 21:30:04 +0000	x	
Approved	2010/07/28 21:30:04 +0000		incorrect answer
Rejected	2010/07/28 21:30:04 +0000		incorrect answer
Approved	2010/07/28 21:30:04 +0000	x	

- 8. For each result, enter an x in the **Approve** column or a reason to reject the result in the **Reject** column.
- 9. Save the spreadsheet as a .csv file.

#### **Uploading Reviewed Results**

Now that you've reviewed the results, you must upload your reviewed file so Mechanical Turk can approve or reject work based on the changes you made to the file.

#### To upload a reviewed .csv file

1. On the Mechanical Turk Requester website <a href="https://requester.mturk.com/">https://requester.mturk.com/</a>, click the Manage tab and then click Results.

- 2. Under Manage Batches click the arrow next to Batches ready for review.
- 3. Click Results on the batch you want to review.
- 4. On the **Review Results** page, click **Upload CSV**. The **Review Results Offline** dialog box appears.

Review Results Offline	×
You can review your results offline and approve or reject the assignments.	
<ol> <li>APPROVE ASSIGNMENT: Indicate which assignments to approve by putting an "x" under a column titled "Approve".</li> <li>REJECT ASSIGNMENT: Indicate which assignment to reject by putting your reject feedback under a column titled "Reject".</li> </ol>	
Please select your modified CSV file for upload Browse	
Upload CSV or Cancel	_

5. Click Browse, select the .csv file you saved, and click Upload CSV.

The number of approvals and rejections are reported.

Please review the following information and confirm yo	ur choices:
<ul> <li>Approve 1 out of 10 assignments</li> <li>Reject and republish 1 out of 10 assignments</li> </ul>	
Republish rejected assignment(s) for other workers	to complete
Note, the assignments that you didn't choose to appro review. You can also use the approve-remaining functi approve the remaining assignments	we or reject will still need your onality to automatically
Would you like to continue?	Cancel

- 6. To republish the rejected assignments, select the **Republish rejected assignment(s) for other** workers to complete check box.
- 7. Click Yes to confirm your choices.

Some versions of Microsoft Excel do not display international characters by default. If your HIT title, description, or HIT results contain international characters, you must follow the instructions for your version of Microsoft Excel to import or activate international characters.

### **Approving Previously Rejected Assignments**

You can approve previously rejected assignments to reverse any rejections you may make by mistake. It is important to make sure that all acceptable work is approved to ensure a good reputation with Workers.

You can only approve previously rejected assignments that were submitted within the previous 30 days and only if the assignment's related Human Intelligence Task (HIT) has not been disposed.

#### To approve previously rejected assignments

1. On the Mechanical Turk Requester website <a href="https://requester.mturk.com/">https://requester.mturk.com/</a>, click the Manage tab and then click Results.

- 2. Under Manage Batches click the arrow next to Batches already reviewed.
- 3. Click Results on the batch you want to approve the previously rejected assignments.
- 4. On the Review Results page for the batch that has the rejected assignments you want to approve, click Download CSV. If you have not downloaded a results .csv file before, you can follow the detailed steps described in Downloading and Reviewing Assignments (p. 32).

Upload CSV	Approve All	Download CSV
------------	-------------	--------------

5. In the downloaded .csv file, mark an assignment as approved by putting an **x** in the **Approve** column and remove the text from the **Reject** column. In the following example, the assignments with the answers **bed**, **cook**, and **grass** are marked for approval.

6. After you mark the rejected assignments for approval, save the file, and then upload the modified .csv file by clicking Upload CSV from the Review Results page for the batch. If you have not uploaded a modified results .csv file before, you can follow the detailed steps described in Uploading Reviewed Results (p. 34).

ease sele	Prouve
	Diowse
	Upload CSV or Cancel

7. You are then asked to confirm your approval choices. Click **Yes** to confirm the approval of the assignments, which approves the assignments, pays the Workers, and updates the Workers' HITs submitted statistics.

Approving a rejected assignment initiates two payments from your Requester Amazon.com account: one payment to the Worker who submitted the results for the reward amount specified in the HIT and one payment for Amazon Mechanical Turk fees. For the operation to succeed, you must have sufficient funds in your account to pay the Worker and the fees.

If your HITs were created using the Amazon Mechanical Turk API, you can approve a previously rejected assignment using the ApproveRejectedAssignment operation.

## **Deleting a Batch**

If the batch you published isn't working the way you'd like, you can delete it.

#### To delete a batch

1. On the Mechanical Turk Requester website https://requester.mturk.com/, click the Manage tab and then click **Results**.

- 2. Under Manage Batches click the arrow next to Batches in progress.
- 3. Click **Delete** on the batch you want to delete.

<u>'Helloworld' @ 26 Aug 17</u>	7:16		Results	Delete
Created: A Time Elapsed: 3 Average Time per Assignment: 2	August 26, 2010 3 days 2 Seconds	Assignments Completed: Estimated Completion Time: Effective Hourly Rate:	3 / 3 COMPLETE \$36.00	1
Batch Progress:	100% submitted	100% published		-

#### The **Delete Batch** dialog box displays.

		×
Delete Batch		
You are about to delete 3 hits from Mechanical Turk along with all the results.		
Are you sure you want to delete the batch?		
	No	Yes

4. Click Yes.

It can take several minutes to delete a batch. All Workers who accepted assignments before you deleted the batch can continue working on them. The batch will not be completely deleted until all assignments accepted by Workers have been returned, submitted, or abandoned.

## **Managing Workers**

#### Topics

- Viewing Worker Statistics (p. 39)
- Blocking a Worker (p. 40)
- Unblocking a Worker (p. 41)
- Awarding a Bonus (p. 43)
- Assigning a Qualification to a Worker (p. 44)
- Revoking a Worker's Qualification (p. 46)
- Managing Worker Details Offline (p. 47)

The **Manage** tab enables Requesters to track Worker performance and take appropriate actions, including blocking Workers, awarding bonuses, and assigning qualifications. Requesters can view the following details on all of the Workers who have worked for them:

- Worker's approval rating on your Human Intelligence Tasks (HITs)
- Worker's blocked status
- Worker's qualification score for up to five of your Qualification Types

Mechanical Turk keeps track of the number of assignments you've approved and rejected for each Worker. You might choose to block a Worker whose assignments you consistently rejected in the past. You might choose to give a bonus to Workers whose work is consistently excellent. The following procedures begin on the **Manage** tab on the **Workers** page.

## **Viewing Worker Statistics**

Mechanical Turk enables you to view a Worker's statistics, which characterize what the Worker is good at.

#### To view a Worker's statistics

1. On the Mechanical Turk Requester website https://requester.mturk.com/, click the Manage tab and then click Workers.

The Manage Workers page appears.

Home Create	Manage	Developer	Help

On this page you can view the Worker's approval rating, as well as the number of assignments you approved and rejected.

## **Blocking a Worker**

If Workers aren't performing to your standards, you can block them from working on your Human Intelligence Tasks (HIT).

#### To block a Worker

1. On the Mechanical Turk Requester website https://requester.mturk.com/, click the Manage tab and then click Workers.

The Manage Workers page appears.

mazonmechanical turk REQUESTER

## Assigning a Qualification to a Worker

This section shows how to assign a Qualification Type to a Worker. You must first create a Qualification Type before you can assign the type to a Worker. For information about creating qualification types, see Managing Qualification Types (p. 50).

#### To assign a Qualification Type to a Worker

1. On the Mechanical Turk Requester website https://requester.mturk.com/, click the Manage tab and then click Workers.

The	Manage	Workers	page	appears.
-----	--------	---------	------	----------

8	Music Critic	Music expert.	98   edit				

6. Click the **edit** link in the **Score** column to change the qualification score.

## **Revoking a Worker's Qualification**

#### To revoke a Worker's qualification

In the case where a qualified Worker submits inferior work, you might choose to revoke their qualification to do work on your batch.

1. On the Mechanical Turk Requester website https://requester.mturk.com/, click the Manage tab and then click Workers.

The Manage Workers page appears.

6	A6RZ3QEOV2869	https://m	3	3	100.00%		88				Never Blocked			

- 4. To update the values, do one or more of the following:
  - Indicate which Qualification Type to assign a Worker by putting a Qualification score in the UPDATE-QualName column, for example, UPDATE-Good Tagger. Qualification scores must be 0 to 100, inclusive.
  - To revoke the Qualification Type, enter Revoke in the UPDATE column for your Qualification Type.
  - Block or unblock a worker by entering Block or Unblock in the UPDATE-BlockStatus column.
- 5. Save the .csv and click **Workers**. The **Manage Workers** page appears.

## Managing Qualification Types

#### Topics

- Creating a Qualification Type (p. 51)
- Viewing Existing Qualification Types (p. 52)
- Deleting Qualification Types (p. 52)

You can create your own Qualification Types, or use the ones supplied by Mechanical Turk.

Mechanical Turk provides System Qualification Types that keep track of a Worker's account statistics and attributes. You can use System Qualification types to control who can and cannot work on your Human Intelligence Tasks (HITs). For example, you can require that Workers have a 95% approval rating or greater to work on your HITs.

Mechanical Turk also provides Master Qualification types that give you access to an elite group of Workers who have demonstrated superior performance working on Photo Moderation or Categorization HITs. Master Workers are prescreened before they are granted a Masters Qualification as a Photo Moderation Master or a Categorization Master. You can access Mechanical Turk Masters by requiring that Workers must have one of the Master Qualifications when creating your HITs.

You can create new custom Qualification Types to select Workers based on any criteria you want. You can assign a custom Qualification Type and a score to Workers who work for you. Then when creating a HIT, you can specify the custom Qualification Type and the minimum score a Worker must have to be eligible to work on your HITs.

The Requester User Interface (RUI) does not support Qualification Tests that a Worker must take to achieve a qualification. Use the Mechanical Turk APIs or the command line tools for testing. For more information, go to http://aws.amazon.com/documentation/mturk/.

The following procedures start on the Manage tab on the Qualification Types page.

Home	Cre	eate	Manage	Developer

## **Creating a Qualification Type**

The following procedure shows you how to create your own Qualification Type.

#### To create a new Qualification Type

1. Click the Manage tab and then click Qualification Types.

2. Click the Create New Qualification Type button.

The Create New Qualification Type dialog box appears.

- 3. In the Friendly Name text box, enter a name that describes the Qualification Type.
- 4. In the **Description:** text box, enter a description of the Qualification Type and click the **Create** button.

The new qualification type appears in the list of Qualification Types on the **Manage Qualification Types** page.

	Name 🔻	ID	Workers who have this Qualification	Creation Date	Description					
0	Trusted Workers	1GN8822QSRFTC30B169M2SM5KJS0NL	4	Thu Sep 30 00:10:37 UTC 2010	My list of great Workers.

There is a short delay before the new Qualification Type appears in the list. You can refresh your browser to update the list.

To assign Workers your new Qualification Type, see Assigning a Qualification to a Worker (p. 44) to a Worker.

## **Viewing Existing Qualification Types**

The following procedure shows you how to view the Qualification Types you create.

#### **To view Qualification Types**

1. Click the Manage tab and then click Qualification Types.

2. The **Qualification Types** page shows you all of your Qualification Types.

	Qualification Types								
	Name 🔻	ID	Workers who have this Qualification	Creation Date	Description

## **Deleting Qualification Types**

The following procedure shows you how to delete Qualification Types.

#### To delete a Qualification Type

1. Click the **Manage** tab and then click **Qualification Types**.

2. Click the X next to the Qualification Type you want to delete.

	Qualification Types									
	Name 🔻	ID	Workers who have this Qualification	Creation Date	Description					
0	Trusted Workers	1GN8822QSRFTC30B169M2SM5KJS0NL	5	Thu Sep 30 00:10:37 UTC 2010	My list of great Workers.					
۵	Right 95%	1044JGI1PBIZ46B61EK5K5F8J8YXTD	5	Wed Sep 29 17:50:51 UTC 2010	This Worker was correct 95% of the time or greater.					
0	Competency	15E65DY5WSSPG1A69NJ7VN3DTK2PAU	9	Wed Jul 28 18:45:25 UTC 2010	Percentage describes how competent I perceive the worker to be.					
0	Are you sure yo	18Z2XKZBYQ31CEIZKXBLFVEBU5DPX0	7	Wed Sep 22 21:51:28 UTC 2010	test description					
0	A workhorse	16IG2O2UXGVNULFBP5UMPDX5FTI0ML	8	Wed Sep 29 17:52:54 UTC 2010	This Worker likes to take on lots of work.					
0	A techy	1JFOPY0MPNJE4JQV1JAFP11A2M5XU4	3	Wed Sep 29 17:51:47 UTC 2010	This Worker has technical skills.					
0	A plus work	1N8BAIOU1LK3O3XQPTT7P0IGFOS0LJ	5	Wed Sep 29 17:51:18 UTC 2010	This Worker does excellent work.					

3. Click the Yes button to confirm the deletion.

There is a short delay before the new Qualification Type disappears from the list. You can refresh your browser to update the list.

When you delete a Qualification Type it is removed from all of your Workers and HIT templates. The deleted Qualification Type is not removed from HITs that Workers are working on.

## **Document History**

This Document History describes the important changes to the documentation since the last release of Amazon Mechanical Turk.

- API version: 2012-03-25
- Latest documentation update: June 3, 2014

Change	Description	Date Changed
Updated Screen Shots	The <b>New Batch</b> button changed to <b>Publish Batch</b> . Screen shots were updated in the topic Publishing a Batch (p. 23).	June 3, 2014
Minor Updates	Various improvements and corrections.	March 26, 2014
New Topic: Approving Previously Rejected Assignments	Added a new topic about approving previously rejected assignments that describes how to reverse a rejection using the Requester User Interface. For more information, see Approving Previously Rejected Assignments (p. 35).	January 28, 2013
New Advanced Properties Option	Updated <b>Edit Properties</b> screen shots for the new <b>Advanced</b> properties option. For more information, see How to Create a Project (p. 7).	November 15, 2012
New Topic: How to Create a Sentiment Project	Added a new topic describing how to create a Sentiment project and updated various screen shots.	October 12, 2012
New Topic: How to Create a Categorization Project	Added a new topic describing how to create a Categorization project and added new screen shots for the new <b>Create</b> tab.	August 8, 2012
More information on Master Workers	More information on Mechanical Turk Master Workers was added to various topics. Master Workers are an elite group of Workers who have demonstrated superior performance working on Photo Moderation or Categorization HITs, before they are granted a Masters Qualification as a Photo Moderation Master or a Categorization Master.	July 3, 2012

Change	Description	Date Changed
New Mechanical Turk HITLayout	New for this release is the ability to create a HITLayout in the Amazon Mechanical Turk Requester UI that can be used with the Mechanical Turk API. A HITLayout is a reusable template used to provide Human Intelligence Task (HIT) question data for CreateHIT. For more information, see HITLayout.	March 29, 2012
Mechanical Turk Review Policies	Amazon Mechanical Turk has added Review Policies that you can use to evaluate Worker submissions against a defined set of criteria. For more information, see Review Policies.	December 1, 2011
Mechanical Turk Masters Qualifications	Amazon Mechanical Turk has added two new Mechanical Turk Masters Qualification types: Categorization Masters and Photo Moderation Masters. The new Mechanical Turk Masters role is established for an elite group of Workers who have demonstrated accuracy on specific types of HITs on the Mechanical Turk marketplace. For more information, see QualificationRequirement.	June 22, 2011
Manage Batches	The <b>Manage</b> tab now has a sub tab called <b>Manage</b> <b>Batches</b> . On that sub tab, you can approve and reject work, import and export results, view batch details, and delete a batch. For more information, see Creating Your Batch of HITs (p. 7).	October 4, 2010
Manage Workers	The <b>Manage</b> tab now has a sub tab called <b>Manage</b> <b>Workers</b> . On that sub tab, you can block Workers, give them bonuses, and assign them a qualification type and score. For more information, see Managing Workers (p. 38).	October 4, 2010
Manage Qualification Types	The <b>Manage</b> tab now has a sub tab called <b>Manage</b> <b>Qualification Types</b> . On that sub tab, you can view the details of qualification types and create new ones. For more information, see Managing Qualification Types (p. 50)	October 4, 2010
Block or Bonus Workers	Now you can block a worker or award a bonus while reviewing their results. For more information, see Managing Your HITs (p. 27).	February 25, 2010
Reject and Republish	Now you can reject work and republish an assignment while you're reviewing a worker's results. For more information, see Managing Your HITs (p. 27).	February 25, 2010
